

**HOW TO GIVE AMERICANS**

**bad gas.**

**FILL UP ON LIQUID COAL**

**A hybrid running on liquid coal fuel pollutes more than a gasoline Hummer.**

There's a lot of talk lately about converting coal into liquid fuel for trucks and cars. Unfortunately, a vehicle running on this brew actually generates twice as much global warming pollution as a vehicle burning ordinary gasoline. That's because getting coal from the ground to the gas tank creates enormous amounts of carbon dioxide. Throwing taxpayer dollars at coal-to-liquid fuels is a bad idea. Americans won't achieve energy security by burning coal in our cars. Instead, we need clean, renewable fuels and sensible steps to significantly improve fuel economy.

**To learn more, go to [SaveOurEnvironment.org](http://SaveOurEnvironment.org).**  
And help place America on a low-polluting diet.
