

## **Subtitle C    Role of Nuclear Power**

### **Section 931    Findings**

Congress finds that –

- (1) Under a greenhouse gas reduction program that places a cap on carbon emissions, the cost of building new reactors will be less prohibitive than they currently are without such a program;
- (2) The market signal sent by placing a cap on carbon will incentivize investment in mature, zero-emissions technology; and
- ( (3) The construction of nuclear plants and the manufacturing of nuclear components in the United States will create new jobs for Americans; and
- (4) Over 40 years of experience in the United States with commercial nuclear power plants has shown that nuclear reactors can be operated safely.

### **Section 932    Sense of the Senate**

It is the Sense of the Senate that a portion of funds, as determined necessary by the appropriate committees of jurisdiction, deposited into the “Low- and Zero-Carbon Electricity Technology Fund” pursuant to section 914 should be used to fund a tax policy that will incentivize the manufacturing of nuclear project components in the United States.
