Attached is a line list of outbreaks of foodborne illness reported to CDC's National Foodborne Outbreak Surveillance System from 1973 to 2005 associated with milk or milk products. The first line list contains outbreaks indicating milk was the contaminated ingredient or where milk or milk product was indicated as being the implicated food vehicle, excluding unpasteurized milk and cheese often made with unpasteurized milk.

The second line list includes foodborne outbreaks where unpasteurized milk or cheese often made from unpasteurized milk was indicated as being the implicated food.

Food vehicles identified are not necessarily confirmed with statistical or epidemiological evidence. All food vehicles identified by the reporting agency are listed in the line lists.
